DISTRIBUTING INNOVATION

Suppliers of Award winning Armstrong RIB Ladders

Armstrong Nautical Products won the safety category at the DAME Awards held at METS. Represented across Europe by Tides Marine International, this innovative product received a great deal of attention. The surface mounted RIB ladder means no holes are needed in the pontoons of the RIB. When in use the ladder maintains an outward angle, which prevents it from pushing under the boat. Manufactured in Stainless Steel, the ladder, rated to 180kgs meets ABYC H41 standard approval. Like most of Armstrong's products the ladder is telescopic making it easy to remove and replace.

Tides Marine International supply to Falmouth Harbour Commissioners.

Late last year Tides Marine International was chosen to supply Sure Seals and Smart Seal Alarm system to Falmouth Harbour Commissioners for their 16m Pilot Vessel "Arrow". This project was the first commercial working vessel to be fitted with the new Smart Seal Alarm System.

The overheat temperature warning system was introduced by Tides Marine International in 2009 and has proved essential for keeping maintenance at a minimum. The pilot boats in Falmouth Harbour regularly achieve in excess of 2,600 working hours per year and down time can be detrimental to the efficient working of the harbour.

Will Davies, Assistant Harbour Master explained "We had experienced some problems with vibration and water in the stern seals. Tides Marine offered us the dry, dripless solution. With their experience and knowledge of the systems used, they were able to help resolve the tail gear problems we were facing".

The alarm system is fitted to the Lloyd's Register certified propeller shaft seals and provides an audible and visual alarm alert to any excessive increase in operating temperature. This system allows for continuous running, with low maintenance and no down time for the vessels.

TIDESMARINE

Where else can you find TIDES MARINE in Europe?

Italy - Opened in 2008 based in Viareggio

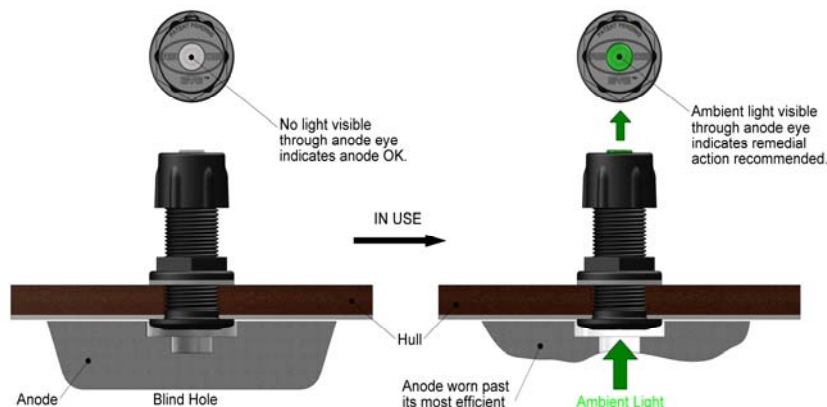

Spain - Opened in 2004 based in the popular marine centre in Palma de Mallorca

Poland - also opened in 2008 and based in Gdynia

ANODE EYE REPRESENTED BY TIDES MARINE INTERNATIONAL

In November 2009 Tides Marine International were appointed by Anode Eye as their first European Distributor.

"The device is surprising simple, consisting of a skin fitting with a cast acrylic lens installed behind the anode"
European Boat Builder

This new product allows boat owners to check the state of their vessels anodes on a regular basis whilst the vessel is afloat eliminating the need for divers or a boat lift. The innovative thru-hull product was nominated at the DAME awards.

ISO Quality Management

2009 saw Tides Marine International attain their ISO 9001:2008 Certification for its supply of marine equipment. Brian Raine (MD) commented, "we have always been proud of the service we offer our clients. With the award of ISO 9001 this has reinforced the quality we are able to supply to our clients in a wide range of trades and industries."
